12. Open Questions & Future Considerations

---

1. Executive Summary

Acctos AI is a multi-tenant web application that serves as the primary customer-facing portal for AI Assist BG's document processing automation services. The product enables organisations to monitor how their automated document processing workflows consume resources (PDF pages and Excel rows), manage their subscription plans, purchase additional capacity when needed, and communicate with the support team — all within a single, unified dashboard.

The platform integrates with Make.com (workflow automation), Azure Document Intelligence (OCR/extraction), OpenAI (AI processing), and Stripe (payments) to deliver end-to-end visibility and control over document processing operations.

---

2. Product Vision & Goals

Vision

To be the industry-leading client portal for AI-powered document processing services, giving organisations complete visibility and control over their automated workflows and costs.

Strategic Goals

#	Goal	Measurable Outcome
G1	**Self-service transparency**	Reduce support inquiries about usage by 60% within 3 months of launch
G2	**Revenue growth through add-ons**	Enable frictionless one-click add-on purchases, targeting 25% of customers purchasing at least one add-on per quarter
G3	**Operational efficiency**	Eliminate manual usage tracking — all usage monitoring, limit enforcement, and billing fully automated
G4	**Customer retention**	Provide enough value through the dashboard to increase renewal rates by 15%
G5	**Multi-language support**	Serve both English and Bulgarian-speaking clients from day one

---

3. Target Users & Personas

Persona 1: Organisation Administrator

- **Role**: IT Manager or Operations Lead
- **Goals**: Configure integrations, monitor usage, manage team access
- **Pain points**: Lack of visibility into automated processing costs, manual tracking in spreadsheets
- **Technical skill**: Moderate — comfortable with API keys and dashboard navigation

Persona 2: Billing Manager

- **Role**: Finance or Procurement
- **Goals**: Track costs, manage subscription, purchase add-ons, review invoices
- **Pain points**: Surprise overages, difficulty understanding usage patterns
- **Technical skill**: Low to moderate

Persona 3: Team Member

- **Role**: Document processing operator or analyst
- **Goals**: View current usage, understand remaining capacity
- **Pain points**: Uncertainty about when limits will be reached
- **Technical skill**: Low — needs a simple, intuitive UI

Persona 4: Support Agent (Internal)

- **Role**: AI Assist BG support team member
- **Goals**: Respond to tickets, manage customer issues, adjust usage credits
- **Pain points**: Context-switching between multiple tools
- **Technical skill**: Moderate

---

4. Problem Statement

Organisations using AI Assist BG's document processing services currently lack:

1. **Real-time visibility** into how many PDF pages and Excel rows they have consumed in the current billing period.
2. **Automated enforcement** — when usage limits are reached, workflows continue running and generate unexpected overages.
3. **Self-service purchasing** — customers cannot buy additional capacity without contacting sales.
4. **Centralised communication** — support requests are scattered across email, phone, and messaging.
5. **Multi-tenant management** — organisations with multiple departments have no way to separate and track usage.

Impact: These gaps lead to billing disputes, customer dissatisfaction, operational overhead for the support team, and delayed upsell opportunities.

---

5. Product Scope

In Scope (v1.0)

Area	Features
Authentication	Email/password registration and login, JWT sessions, multi-tenant switching
Usage Dashboard	Real-time PDF page and Excel row tracking, daily/monthly charts, infrastructure cost breakdown (Make.com, Azure, OpenAI)
Billing & Subscriptions	Three subscription tiers (Starter, Professional, Enterprise), Stripe-integrated payments, add-on purchases
Usage Limits	Auto-pause Make.com scenarios on limit breach, auto-resume on add-on purchase or period reset
User Management	Invite users, assign roles (6 roles), change passwords, remove members
Support Tickets	Create tickets with categories, threaded messages, internal notes, attachment support
Integrations	Make.com connection/sync, Azure Document Intelligence verification
Internationalisation	English and Bulgarian
Admin Tools	Adjust usage credits, simulate add-on purchases, reset usage counters, manually pause/resume scenarios

Out of Scope (v1.0)

- Direct document upload / processing through the dashboard
- White-label / custom branding per tenant
- SSO / SAML authentication
- Webhook notifications to customers (Slack, email)
- Public API for programmatic access by customers
- Mobile-native application

---

6. Functional Requirements

FR-1: Authentication & Multi-Tenancy

ID	Requirement	Priority
FR-1.1	Users register with email, password, full name, and organisation name	P0
FR-1.2	Registration creates a User, Tenant, and Membership (ORG_OWNER) in a single transaction	P0
FR-1.3	Users authenticate with email/password, receiving a JWT token	P0
FR-1.4	Users with multiple tenant memberships can switch tenants without re-authenticating	P1
FR-1.5	All data access is scoped to the active tenant	P0

FR-2: Usage Monitoring

ID	Requirement	Priority
FR-2.1	Dashboard displays current-period PDF pages used vs. limit	P0
FR-2.2	Dashboard displays current-period Excel rows used vs. limit	P0
FR-2.3	Custom add-on bars always visible, showing 0/0 when no add-on exists	P0
FR-2.4	Daily usage charts for the past 7 or 30 days	P1
FR-2.5	Monthly usage history table (persistent across resets)	P1
FR-2.6	Infrastructure usage breakdown: Make.com credits, Azure cost, OpenAI tokens	P2
FR-2.7	CSV export of raw usage events	P2

FR-3: Billing & Subscriptions

ID	Requirement	Priority
FR-3.1	Display three subscription plans with pricing, features, and upgrade/downgrade paths	P0
FR-3.2	Redirect to Stripe checkout for plan purchase	P0
FR-3.3	Display available add-ons (PDF pages, Excel rows)	P0
FR-3.4	Process add-on purchases via Stripe webhook	P0
FR-3.5	Add-on credits consumed FIRST before base plan quota	P0
FR-3.6	Auto-reset add-on credits to 0 when fully exhausted	P0
FR-3.7	Billing period resets on the 5th of each month	P0
FR-3.8	Add-on credits expire at period reset	P1

FR-4: Automated Workflow Management

ID	Requirement	Priority
FR-4.1	Auto-pause all Make.com scenarios when usage limit is exceeded	P0
FR-4.2	Auto-resume scenarios when add-on purchase or admin action restores capacity	P0
FR-4.3	Display persistent banner when scenarios are paused	P0
FR-4.4	Admin can manually pause/resume all scenarios	P1
FR-4.5	Limit check runs on every usage-status poll (every ~60s)	P0

FR-5: User Management

ID	Requirement	Priority
FR-5.1	Admins can create new users within their tenant	P0
FR-5.2	Admins can assign roles (ORG_OWNER, ADMIN, BILLING_ADMIN, MEMBER, READONLY, SUPPORT_AGENT)	P0
FR-5.3	Admins can change any user's password	P1
FR-5.4	Admins can remove users from the tenant	P0
FR-5.5	Users page displays user list with email, name, and role	P0

FR-6: Support Tickets

ID	Requirement	Priority
FR-6.1	Users can create tickets with a subject category and optional description	P0
FR-6.2	Predefined categories: System not working, Files issues, General support, Downgrade/Cancel	P0
FR-6.3	Threaded message display for ongoing communication	P1
FR-6.4	Internal messages visible only to support agents	P2
FR-6.5	File attachments on messages	P2

FR-7: Integration Management

ID	Requirement	Priority
FR-7.1	Store and test Make.com API key, Organisation ID, and Folder ID	P0
FR-7.2	Store and test Azure Document Intelligence credentials	P1
FR-7.3	Sync usage data from Make.com for the past 30 days	P1

FR-8: Admin Tools

ID	Requirement	Priority
FR-8.1	Adjust (add/remove) PDF pages and Excel rows consumed in the current period	P1
FR-8.2	Simulate add-on purchases for testing (bypasses Stripe)	P2
FR-8.3	Reset all usage data and start fresh billing period	P1
FR-8.4	Reset custom add-on credits to 0	P2
FR-8.5	Test payment cards with Stripe test-mode links	P2

7. Non-Functional Requirements

ID	Category	Requirement
NFR-1	**Performance**	Dashboard loads within 2 seconds on standard broadband
NFR-2	**Performance**	Usage-status endpoint responds within 500ms
NFR-3	**Availability**	99.5% uptime SLA
NFR-4	**Security**	All passwords hashed with bcrypt (10+ rounds)
NFR-5	**Security**	JWT tokens with configurable expiry (default 24h)
NFR-6	**Security**	Complete tenant data isolation — no cross-tenant data leakage
NFR-7	**Security**	HMAC signature verification on external event ingestion
NFR-8	**Data Integrity**	Idempotent event processing — duplicate events silently ignored
NFR-9	**Scalability**	Daily aggregation tables support thousands of tenants without query degradation
NFR-10	**Localisation**	Full English and Bulgarian language support
NFR-11	**Auditability**	All significant actions logged with user, tenant, timestamp, and metadata

8. User Stories

Epic: Usage Monitoring

- **US-1**: As an organisation admin, I want to see how many PDF pages and Excel rows my team has consumed this billing period, so I can plan capacity.
- **US-2**: As a billing manager, I want to see a chart of daily usage trends, so I can predict when we might reach our limit.
- **US-3**: As a team member, I want to see the remaining capacity at a glance, so I know if my next job will succeed.

Epic: Billing & Add-ons

- **US-4**: As a billing manager, I want to purchase additional PDF pages with a single click, so processing isn't interrupted.
- **US-5**: As an admin, I want to see that add-on credits are consumed before base plan quota, so purchased credits aren't wasted.
- **US-6**: As a billing manager, I want add-on bars to always be visible (showing 0/0 when empty), so I know the option exists.

Epic: Workflow Automation

- **US-7**: As an admin, I want Make.com scenarios to auto-pause when we exceed our limit, so we don't incur unexpected costs.
- **US-8**: As an admin, I want scenarios to auto-resume when I purchase add-on credits, so processing resumes without manual intervention.
- **US-9**: As a team member, I want to see a clear banner when workflows are paused, so I understand why processing has stopped.

Epic: User Management

- **US-10**: As an ORG_OWNER, I want to invite team members with appropriate roles, so they have the right level of access.
- **US-11**: As an admin, I want to change a user's password, so I can help team members who are locked out.

Epic: Support

- **US-12**: As a user, I want to submit a support ticket from within the dashboard, so I don't need to leave the platform.

- **US-13**: As a support agent, I want to see all tickets for a tenant with threaded messages, so I have full context.

---

9. System Constraints & Dependencies

External Dependencies

Dependency	Purpose	Risk Level
Make.com API (eu2)	Workflow execution, scenario control, usage sync	High — core workflow depends on this
Stripe	Payment processing, subscription management	High — revenue depends on this
Azure Document Intelligence	Document OCR and extraction	Medium — indirect dependency
OpenAI	AI-powered processing and cost tracking	Low — supplementary feature
PostgreSQL	Primary data store	High — all features depend on this

Technical Constraints

- Billing period fixed to 5th of month (non-configurable in v1)
- Make.com API limited to eu2 region
- Maximum 200 scenarios per folder (Make.com API pagination limit)
- Usage-status polling interval fixed at 60 seconds
- Single-region deployment (no multi-region failover in v1)

---

10. Release Phases

Phase 1: Core Platform (Current — v1.0)

- Authentication & multi-tenancy
- Usage monitoring (PDF pages, Excel rows)
- Billing with 3 subscription tiers

- Add-on purchases (Stripe)
- Auto-pause/resume Make.com scenarios
- User management with 6 roles
- Support tickets
- English + Bulgarian localisation
- Admin tools (adjust credits, simulate purchases, reset usage)

Phase 2: Enhanced Billing (Planned)

- Stripe Customer Portal integration
- Automated invoicing
- Usage-based billing (pay-per-page option)
- Annual subscription discount
- Payment history in dashboard

Phase 3: Advanced Features (Future)

- SSO / SAML authentication
- Webhook notifications to customers
- Public REST API for programmatic access
- Custom reporting and analytics
- White-label branding per tenant
- Mobile application

---

11. Success Metrics

Metric	Target	Measurement
Time to first value	< 5 minutes from registration to seeing usage data	Analytics
Add-on purchase conversion	25% of tenants purchase at least one add-on per quarter	Stripe data
Support ticket reduction	60% reduction in usage/billing inquiries	Ticket categorisation
Dashboard adoption	80% of active tenants log in at least weekly	Auth logs
Auto-pause accuracy	100% of limit breaches result in scenario pauses within 2 minutes	System logs
Uptime	99.5%	Monitoring

---

12. Open Questions & Future Considerations

#	Question	Status
Q1	Should billing period be configurable per tenant (e.g., anniversary-based)?	Deferred to Phase 2
Q2	Should we support per-scenario usage limits in addition to tenant-level?	Under consideration
Q3	How should we handle tenants with multiple Make.com folders?	Currently single folder; needs design review
Q4	Should we add email notifications for approaching/exceeding limits?	Planned for Phase 2
Q5	Is there demand for a usage API for customer-side integrations?	Planned for Phase 3
Q6	Should the Starter plan (£249) include a higher base limit than 1,000?	Product review needed
