1. Executive Summary

Acctos AI is a customer-facing SaaS dashboard built to serve clients of AI Assist BG's document processing automation services. It addresses a critical gap in the current service delivery: clients have no self-service visibility into their usage, costs, or workflow status. This results in support overhead, billing friction, missed upsell opportunities, and customer churn.

The platform transforms the customer experience from opaque and support-dependent to transparent and self-service, while creating a new revenue channel through in-app add-on purchases. The tiered subscription model (£249–£2,499/month) combined with one-time add-on purchases creates both predictable recurring revenue and transactional upside.

Investment ask: Engineering and operational resources to maintain and extend the platform through Phase 2 (enhanced billing) and Phase 3 (advanced features).

Expected ROI: 40-60% reduction in support overhead, 25% increase in add-on revenue, and 15% improvement in customer retention within 12 months.

---

2. Market Context

2.1 Industry Trends

The intelligent document processing (IDP) market is projected to grow from $2.2 billion (2024) to $12.8 billion (2030), driven by:

- **Digital transformation acceleration** — organisations automating manual document workflows
- **AI/ML maturity** — OCR and extraction models becoming production-ready
- **Compliance pressure** — financial services and healthcare requiring automated audit trails
- **Cost reduction imperative** — enterprises seeking to reduce manual data entry costs by 60-80%

2.2 Customer Expectations

Modern B2B SaaS customers expect: - **Self-service dashboards** with real-time usage visibility - **Transparent billing** with clear consumption-based pricing - **Automated enforcement** — no surprise overages - **In-app purchasing** — buy additional capacity without contacting sales

2.3 Target Market

AI Assist BG's primary market: - **Geography:** United Kingdom, Bulgaria, and broader EU - **Segments:** Financial services (bank statement processing), legal (contract extraction), accounting (invoice processing) - **Organisation size:** SME to mid-market (10-500 employees) - **Decision makers:** IT Managers, Operations Leads, Finance Directors

---

3. Business Problem

3.1 Current State (Before Acctos AI)

Challenge	Impact
No usage visibility	Clients don't know how many pages/rows they've consumed until they receive an invoice
No automated enforcement	Workflows run past limits, generating unexpected overages and billing disputes
Manual limit management	Support team manually tracks usage and contacts clients when approaching limits
No self-service purchasing	Adding capacity requires a phone call or email to sales, causing workflow downtime
Scattered support	Customer issues arrive via email, phone, and messaging with no unified tracking
No audit trail	No systematic record of who did what, when — compliance risk
Single-language	Bulgarian-speaking clients struggle with English-only communications

3.2 Cost of Inaction

Area	Estimated Annual Impact
Support staff time on usage inquiries	£18,000 (1 FTE × 30% of time)
Revenue leaked from billing disputes	£8,000 (estimated write-offs)
Lost upsell opportunities (delayed add-on purchases)	£24,000 (estimated)
Customer churn from poor experience	£36,000 (2 customers × avg. £18,000 ARR)
Total estimated annual impact	**£86,000**

---

4. Solution Overview

Acctos AI addresses every challenge identified in the business problem:

Challenge	Solution	Feature
No usage visibility	Real-time dashboard with progress bars and charts	Dashboard, Billing page
No automated enforcement	Auto-pause Make.com scenarios at limit	Usage limit engine
Manual limit management	Automated limit checking every 60 seconds	Usage-status polling
No self-service purchasing	One-click Stripe add-on purchases	Add-on cards, Stripe webhook
Scattered support	In-app ticket system with categories	Support tickets
No audit trail	Comprehensive audit logging	AuditLog model
Single-language	English + Bulgarian interface	LanguageContext

Technical Architecture Highlights

- **Multi-tenant SaaS** — single deployment serves all clients with complete data isolation
- **Event-driven usage tracking** — idempotent ingestion from Make.com with daily aggregation
- **Lazy billing resets** — no cron jobs needed; resets triggered on next client interaction
- **Real-time automation control** — direct Make.com API integration for scenario pause/resume

---

5. Revenue Model

5.1 Subscription Revenue (Recurring)

Plan	Monthly Price	Annual Price	Target Market
Starter	£249	£2,988	Small teams, low volume
Professional	£989	£11,868	Core market, moderate volume
Enterprise	£2,499	£29,988	High-volume operations

Average Revenue Per Account (ARPA): Estimated £989/month (Professional plan most popular)

5.2 Add-on Revenue (Transactional)

Add-on	Price	Expected Frequency
1,000 PDF Pages	£TBD	1-2× per month per customer
5,000 PDF Pages	£TBD	1× per month for high-volume customers
1,000 Excel Rows	£TBD	1-2× per month per customer
5,000 Excel Rows	£TBD	1× per month for high-volume customers

Key insight: Add-on revenue is incremental to subscriptions and has near-100% gross margin (no additional infrastructure cost for existing processing capacity).

5.3 Revenue Composition Target

- **Year 1:** 85% subscription / 15% add-ons
- **Year 2:** 75% subscription / 25% add-ons (as self-service purchasing matures)
- **Year 3:** 70% subscription / 30% add-ons

---

6. Competitive Landscape

6.1 Direct Competitors

Competitor	Strengths	Weaknesses	Acctos AI Advantage
Rossum	Strong OCR, enterprise focus	No Make.com integration, expensive	Direct Make.com workflow control, lower price point
Docparser	Easy setup, template-based	Limited automation, no usage dashboard	Full automation control with auto-pause/resume
Parseur	Good email parsing	Narrow document types, no billing portal	Broader document support, integrated billing

6.2 Indirect Competitors

Category	Examples	Acctos AI Differentiation
Generic automation dashboards	Zapier, n8n	Acctos AI is purpose-built for document processing with domain-specific metrics (pages, rows)
Usage tracking tools	Datadog, Mixpanel	Acctos AI combines usage tracking with billing, workflow control, and support
Billing platforms	Stripe Dashboard, Chargebee	Acctos AI integrates billing with operational workflow control

6.3 Competitive Moat

1. **Make.com deep integration** — direct scenario control (pause/resume) is unique in the market
2. **Domain-specific metrics** — PDF pages and Excel rows as first-class billing units (not generic API calls)
3. **Automated enforcement** — real-time limit checking with automatic workflow control
4. **Bilingual support** — English + Bulgarian from day one (important for regional market)

---

7. Value Proposition

For Customers

> *"Know exactly where you stand — see your document processing usage in real-time, buy more capacity with one click, and never be surprised by your bill again."*

Quantified benefits: - **Save 2+ hours/week** previously spent asking about usage status - **Zero workflow downtime** from forgotten limit management (auto-pause prevents overages, add-on purchase auto-resumes) - **Transparent billing** — no disputes, no surprise invoices

For AI Assist BG

> *"Turn usage management from a support burden into a revenue engine — automated limit enforcement, frictionless upselling, and data-driven customer success."*

Quantified benefits: - **-60% support tickets** about usage and billing - **+25% add-on revenue** from self-service purchasing - **+15% retention** from improved customer experience - **Zero**

manual tracking — fully automated usage monitoring and enforcement

---

8. Product Analysis

8.1 SWOT Analysis

	Positive	Negative
Internal	**Strengths:** Deep Make.com integration, automated workflow control, multi-tenant architecture, bilingual support, comprehensive audit logging	**Weaknesses:** Single database region, limited to eu2.make.com, Stripe-only payments, no mobile app, manual Stripe payment link setup for add-ons
External	**Opportunities:** Expand to more languages, add more automation platforms (Zapier, n8n), usage-based pricing model, white-label for partners, API marketplace	**Threats:** Make.com API changes, Stripe fee increases, competitor vertical integration, customer preference for native Make.com dashboards

8.2 Feature Maturity Assessment

Feature	Maturity	Notes
Authentication & multi-tenancy	Production-ready	JWT auth, role-based access, tenant isolation
Usage monitoring	Production-ready	Real-time tracking, daily aggregation, monthly history
Billing subscriptions	Functional	Stripe payment links work; customer portal placeholder
Add-on purchases	Production-ready	Stripe webhook, auto-resume, simulate for testing
Auto-pause/resume	Production-ready	Polling-based limit checks every 60s
User management	Production-ready	CRUD, 6 roles, password change
Support tickets	MVP	Basic create/list; no email notifications yet
Integration settings	Functional	Make.com + Azure; test connection works
Audit logging	Schema-ready	Model defined; limited UI visibility

8.3 Technical Debt Assessment

Area	Severity	Description
Type casting	Low	`(prisma.tenant as any)` used to work around Prisma type generation lag
Stripe checkout	Medium	`POST /checkout` and `GET /portal` are placeholder stubs
Attachment storage	Medium	`POST /:id/attachments` placeholder — no blob storage configured
Default limits migration	Low	One-time migration in `usage-status` upgrading 1000→5000 limits
CSS architecture	Low	Vanilla CSS inline in components; no design system

8.4 User Flow Analysis

Critical Path: "Customer runs out of pages"

```
1. Customer's documents are being processed (Make.com scenarios running)
2. Usage reaches 5,000/5,000 pages
3. Layout.tsx polls usage-status → detects exceeded limit
4. Server pauses all Make.com scenarios via API
5. Red banner appears: "Your agent has been paused"
6. Customer navigates to Billing page
7. Sees usage at 5,000/5,000, clicks "Purchase 1,000 PDF Pages"
8. Stripe checkout completes → webhook fires → addonPagesLimit += 1,000
9. Next usage-status poll detects 5,000 < 6,000 → scenarios auto-resume
10. Banner disappears, Custom PDF Pages shows 0/1,000
11. Processing resumes, add-on credits consumed first
12. After 1,000 add-on pages consumed → addonPagesLimit resets to 0
13. Custom bar returns to 0/0, base plan bar continues filling
```

Time from purchase to resume: ~60-120 seconds (one polling cycle)

---

9. Financial Projections

9.1 Revenue Scenarios (12-Month Forecast)

Assumptions: - Current client base: 10 active tenants - Average plan: Professional (£989/mo) - New client acquisition: 2 per quarter - Add-on attachment rate: 25% of tenants, 1.5× per month, avg. £150 per purchase

Quarter	Tenants	Subscription MRR	Add-on Revenue	Total Quarterly
Q1	10	£29,670	£1,125	£30,795
Q2	12	£35,604	£1,620	£37,224
Q3	14	£41,538	£2,268	£43,806
Q4	16	£47,472	£2,880	£50,352
Year 1 Total		**£154,284**	**£7,893**	**£162,177**

9.2 Cost Savings

Area	Annual Savings
Reduced support overhead (usage/billing inquiries)	£18,000
Eliminated manual usage tracking	£6,000
Reduced billing disputes	£8,000
Reduced churn (15% improvement)	£36,000
Total annual savings	**£68,000**

9.3 Return on Investment

Metric	Value
Platform development investment (estimated)	£80,000
Year 1 incremental revenue (add-ons + reduced churn)	£43,893
Year 1 cost savings	£68,000
Year 1 total value	**£111,893**
Payback period	**~9 months**

---

10. Risk Assessment

#	Risk	Probability	Impact	Mitigation
R1	**Make.com API changes** break scenario control	Medium	High	Abstract Make.com API calls behind service layer; monitor Make.com changelogs
R2	**Stripe webhook failures** miss payments	Low	High	Implement webhook retry logic; add manual reconciliation tool
R3	**Database performance** degrades with usage growth	Low	Medium	Daily aggregation tables limit query volume; add indexes as needed
R4	**Customer adopts competitor** with native dashboard	Medium	High	Accelerate Phase 2/3 features; deepen integration value
R5	**Security breach** exposes tenant data	Low	Critical	JWT + tenant isolation + bcrypt; regular security audits; HMAC for external APIs
R6	**Single-region deployment** causes latency for remote clients	Medium	Low	Plan multi-region in Phase 3; CDN for static assets
R7	**Add-on pricing** not yet finalised	High	Medium	A/B test pricing; monitor conversion rates from day one

---

11. Go-to-Market Strategy

11.1 Launch Strategy

Phase 1: Existing Client Migration 1. Invite all existing AI Assist BG clients to create accounts 2. Pre-configure their tenant settings and Make.com integrations 3. Run guided onboarding sessions (1:1) 4. Collect feedback for rapid iteration

Phase 2: New Client Acquisition 1. Include Acctos AI dashboard access as part of all new service agreements 2. Use the dashboard as a sales differentiator during demos 3. Highlight self-service add-on purchasing as a competitive advantage

Phase 3: Product-Led Growth 1. Enable free trial accounts with limited usage 2. Self-service plan upgrades from within the dashboard 3. Referral programme for existing clients

11.2 Pricing Strategy

- **Starter (£249/mo):** Entry-level for small operations or proof-of-concept
- **Professional (£989/mo):** Core offering for established clients; 5× the capacity at 4× the price (value positioning)
- **Enterprise (£2,499/mo):** High-volume clients with SLA requirements; 15× the capacity at 10× the price (best value per unit)
- **Add-ons:** Priced to be attractive for occasional bursts but not as economical as upgrading (incentivise plan upgrades)

---

12. Key Performance Indicators

Product KPIs

KPI	Target	Measurement
Daily Active Tenants	80% of paying tenants	Auth logs
Add-on purchase rate	25% of tenants per month	Stripe transactions
Mean time to resume (after pause)	< 5 minutes	System logs
Support ticket volume (usage/billing)	-60% within 3 months	Ticket categorisation
Customer NPS	> 50	Quarterly survey

Technical KPIs

KPI	Target	Measurement
API response time (p95)	< 500ms	Server logs
Dashboard load time	< 2 seconds	Lighthouse
Usage-status accuracy	100% (no missed limit breaches)	Usage-status vs. Make.com state
Webhook processing time	< 5 seconds from Stripe event to credit	Stripe → server logs
Uptime	99.5%	Monitoring

Business KPIs

KPI	Target	Measurement
Monthly Recurring Revenue	£15,000+ by end of Year 1	Stripe
Net Revenue Retention	> 110% (expansion through add-ons and upgrades)	Revenue analytics
Customer Acquisition Cost	< £2,000	Sales + marketing spend / new customers
Payback Period	< 12 months	Financial tracking

---

13. Roadmap & Investment Priorities

Near-Term (Q2 2026)

Priority	Feature	Business Impact
P0	Finalise add-on pricing and launch	Direct revenue generation
P0	Stripe Customer Portal integration	Self-service invoice access, reduces support
P1	Email notifications (approaching limit, limit reached)	Proactive customer communication
P1	Enhanced ticket system (email replies, status notifications)	Improved support experience

Mid-Term (Q3-Q4 2026)

Priority	Feature	Business Impact
P1	Usage-based billing option (pay-per-page)	New pricing model for variable-volume clients
P1	Annual subscription discount	Improve cash flow and retention
P2	Public API for programmatic access	Developer-friendly, attracts technical clients
P2	Webhook notifications (Slack, email)	Real-time alerts without dashboard login

Long-Term (2027)

Priority	Feature	Business Impact
P2	SSO / SAML authentication	Enterprise requirement
P2	White-label branding	Partner channel enablement
P3	Multi-region deployment	Improved performance for global clients
P3	Mobile application	On-the-go monitoring

---

14. Conclusion

Acctos AI transforms AI Assist BG's service delivery from an opaque, support-heavy model to a transparent, self-service platform. The business case is compelling:

- **Revenue upside:** New add-on revenue stream with near-100% margin
- **Cost savings:** £68,000 annual savings from reduced support and churn
- **Customer experience:** Real-time visibility, one-click purchasing, automated workflow control
- **Competitive advantage:** Deep Make.com integration with automated pause/resume is unique in the market
- **Payback:** ~9 months to recover development investment

The platform is production-ready for its core features and has a clear roadmap for expansion. The recommendation is to proceed with Phase 2 development immediately, focusing on Stripe Customer Portal, email notifications, and add-on pricing finalisation.
